Abstract

Present study examined the Impact of Extracurricular activities on Students Academic Performance. To obtain this purpose, 100 Secondary students selected from Nagpur District who participated in extracurricular activities and 100 Secondary students selected from Nagpur District who did not participated in extracurricular activities. The result indicates that Extracurricular activities do not plays important role in academic performance. The students who do not participate in extracurricular activities have same academic performance as the students participate in extracurricular activities. There is no significant difference found regarding Academic Performance of Students who participated in extracurricular activities and students who do not participate extracurricular activities.

Keywords: Extracurricular Activities, Academic Performance, Academic Achievements.
